

GITAM

STUDENT PORTAL

App Installation Guide

Samuel Vasamsetti

This file will guide you how you can install the GITAM Student Portal App. This guide explains the installation taking WhatsApp as a source of the App. However the app is developed in way that you can share the app to your friends from any sharing apps such as WhatsApp, Mail etc. Check at the end how you can do this. Every step is explained. However if you don't care for the explanation, simply go for the headlines which is pretty much enough for the installation.

**Please share this app and guide to all of your GITAM friends.
Please do not forget this.**

This APK file might contain unsafe content. Make sure you trust the sender before you open and install it.

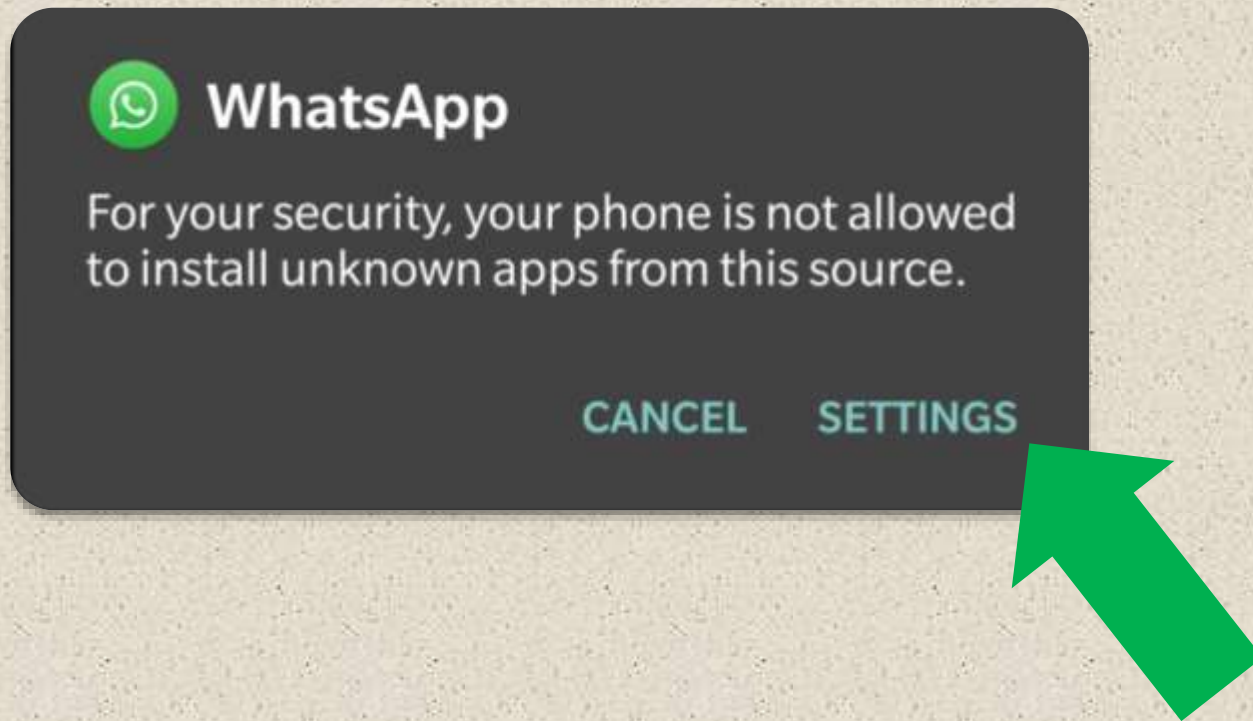

CANCEL

OPEN

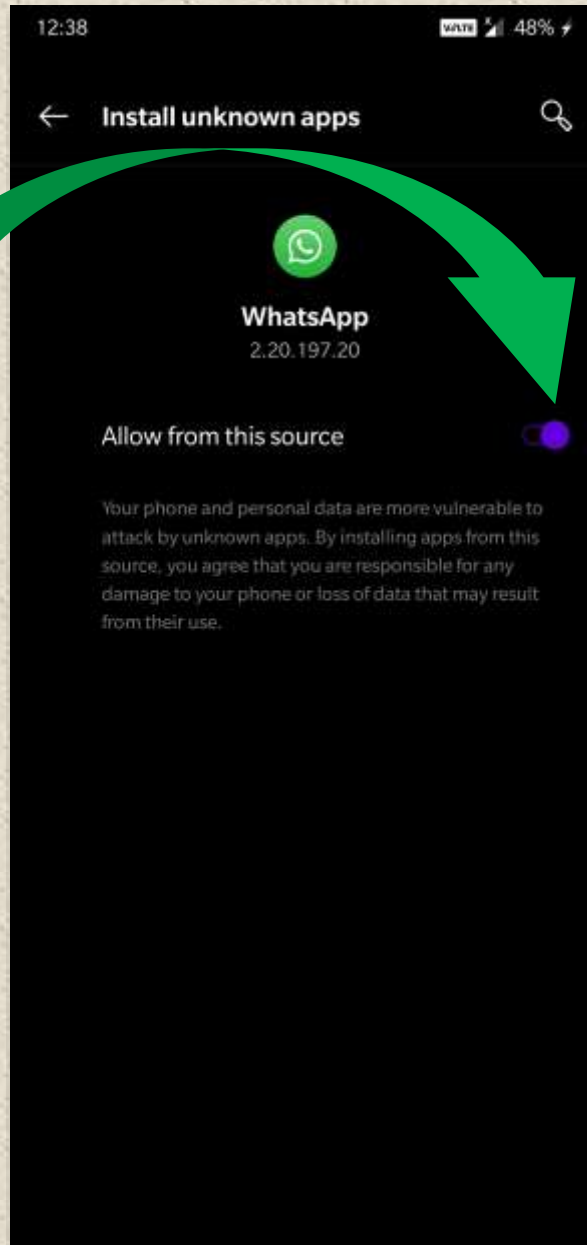

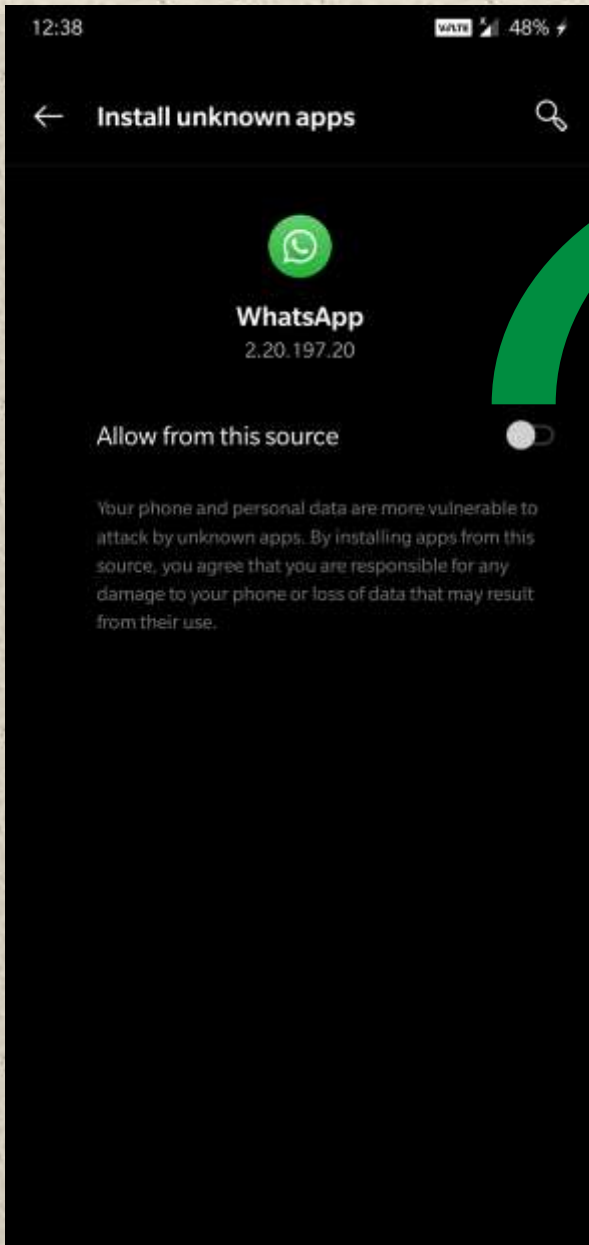

Tap on **OPEN**

If you received this app through WhatsApp, you'll most likely get a message similar to this. It is WhatsApp's way of trying to keep you safe from fake apps (probably containing viruses). Don't worry this app is virus free and you can trust it.

Tap on **SETTINGS**

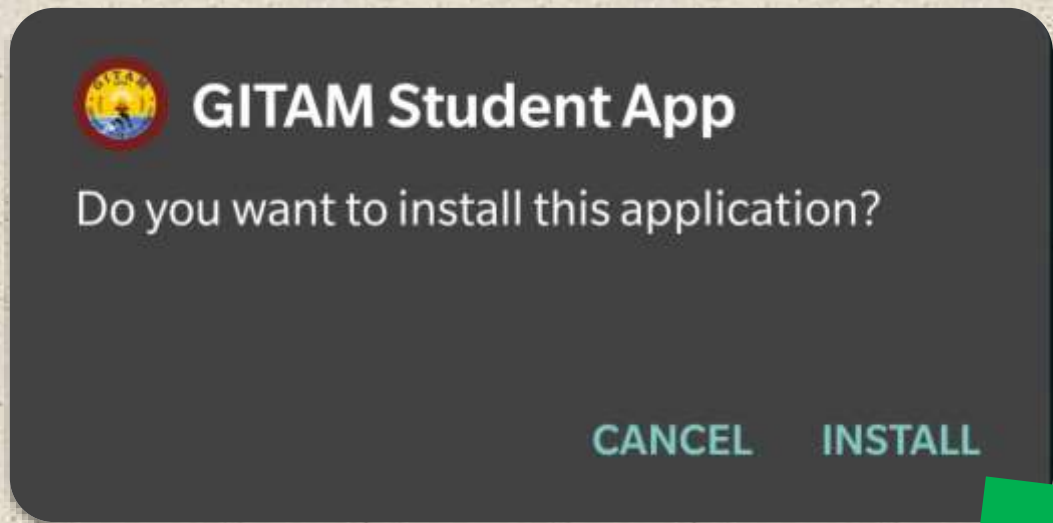

Again, another security-related message from Android which blocks all apps on your phone from installing any additional apps.

Tap to **Switch ON**

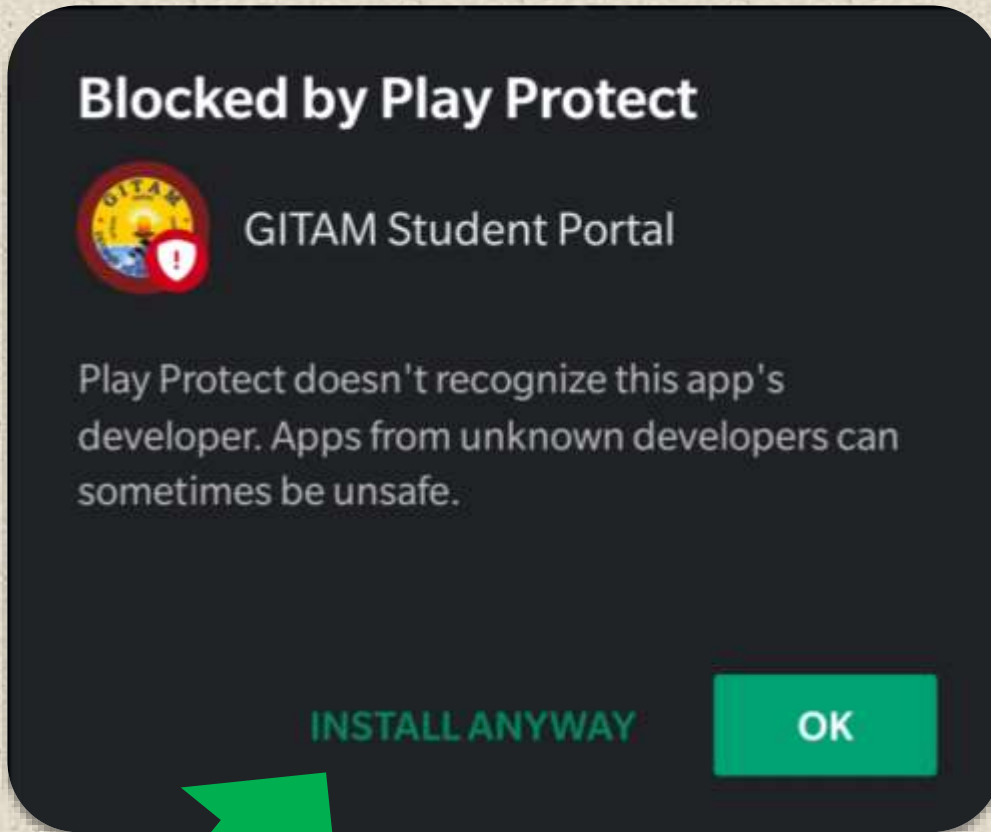

Switching on this means that you've granted access for WhatsApp to install any apps received, when clicked. Don't worry, WhatsApp never installs any apps without your confirmation. You can also switch off once you've done installing the app.

Note that older phones might get an option saying, "Install unknown apps" instead of "Allow from this source", it is basically the same thing but you're giving access to all apps.

Tap on **INSTALL**

This is the part where the actual installation starts. Pretty much self-explanatory.

Tap on **INSTALL ANYWAY**

Yet another security-related message but this time from Google's Play Protect, which checks if the developer has any products on the Play Store. I don't have any apps on Play Store so it fails to recognize me. I believe I am one of your friends so you can definitely trust me and install the app.

Also this appears only if your Internet Connection is on.

Send app for scanning?

GITAM Student Portal

Play Protect hasn't seen this app before. To protect yourself and others, send it for a security scan.

☐ Always send unknown apps

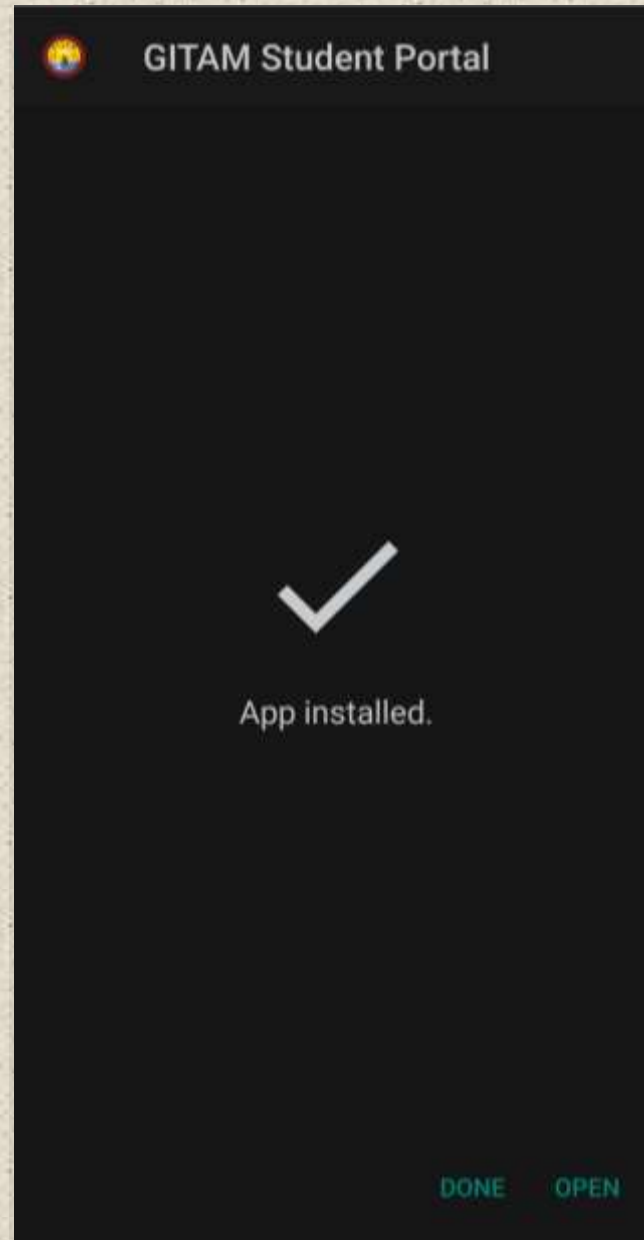

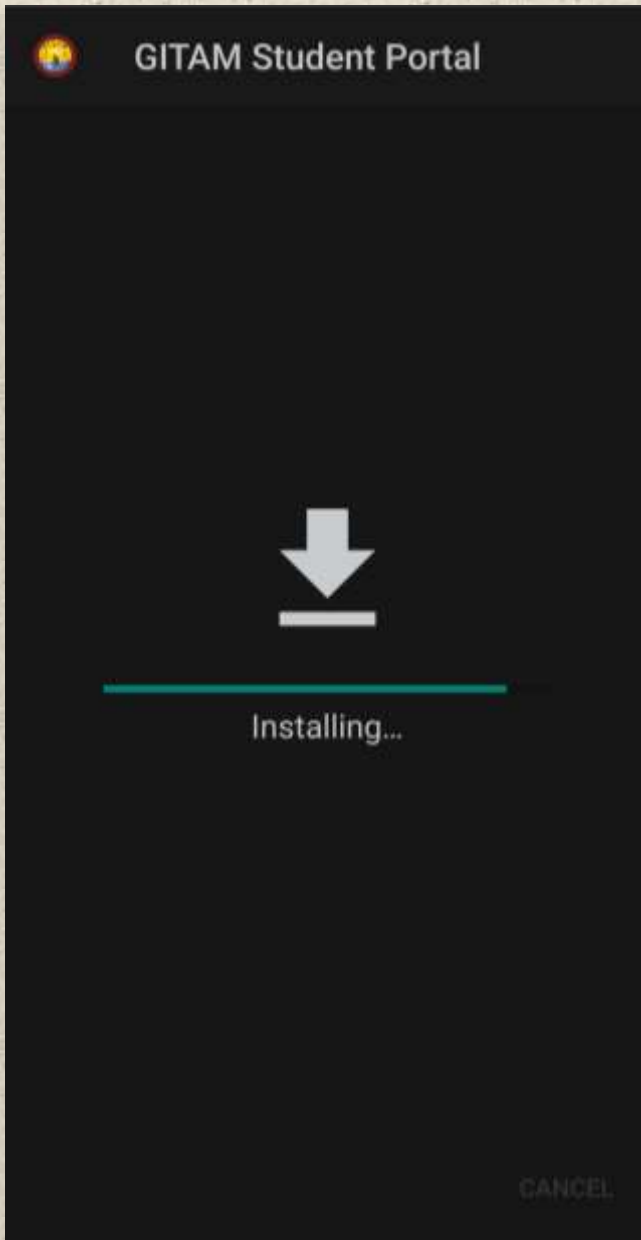

You can change this setting in Play Protect settings

DON'T SEND

SEND

Tap on any option

This app isn't available on Play Store and that's what it says. I actually have no good idea on what basis Google's Play Protect scans apps for security scan. This app is malware-free so you can click on send if you like to run a security check.

Wait until the installation completes.

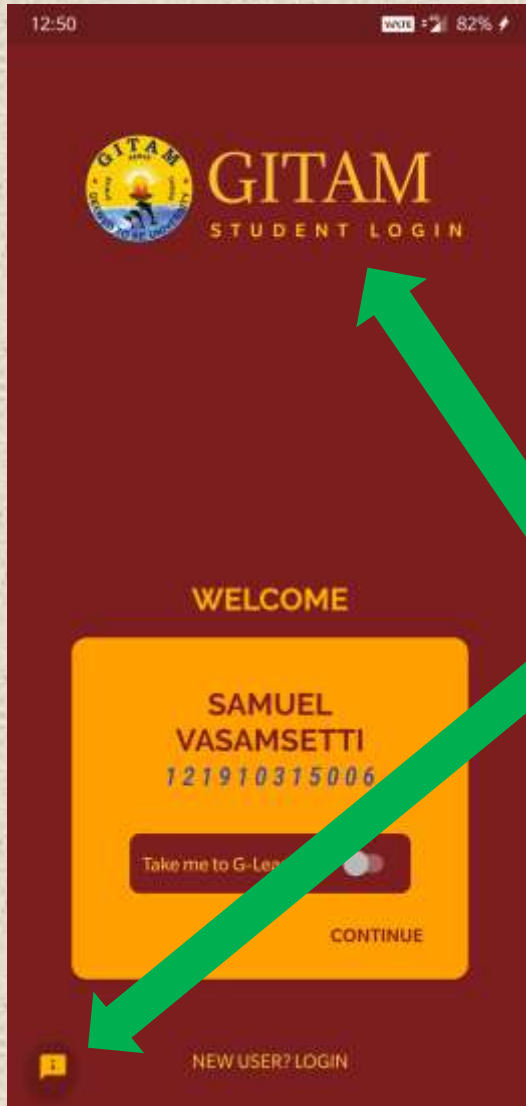

You can see the progress of the app getting installed. Once it completes,

tap on **DONE** or **OPEN**.

Tapping on DONE takes to back to WhatsApp.

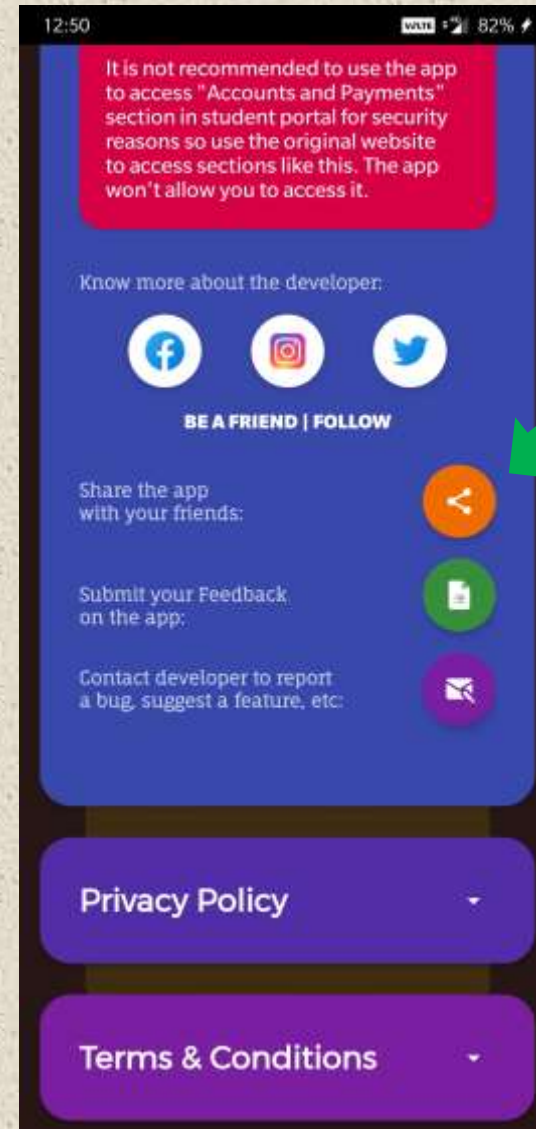

The app can now be found in the list of your apps, home or app drawer.

How to share the GITAM Student Login app from itself:

One thing, this is only to share the app, not this guide.

Tap here or there

Tap on the **Share** button

Now you'll get to choose from which apps you want to share this app from.

**For Privacy Policy,
Terms & Conditions
check the about section
of the app after
installation.**

**Nothing more to explain, the app is intuitive
and easy to use.**

Thanks for following,
now you are good to go.

**Please share this guide
and the APP to all of your
GITAM friends.
Please do not forget this.**
